As the recipients of this volume and the March 24th version of this same publication are aware, the United States Supreme Court did uphold the appeal of the Minnesota Senate and remanded the January 25th reapportionment plan to the Federal Court Panel for a new reapportionment at 67 senate districts and 134 house districts.

The Minnesota Analysis and Planning System has republished these profiles in accordance with the commitment it made on March 24th. Holders of record of the March edition have been sent replacement copies at no charge.

This publication has been specially written, computer-programmed, and printed in response to the numerous requests that the Minnesota Analysis and Planning System (MAPS) has received for descriptive data about the legislative districts created by the Federal Court Order of January 25, 1972. The following letter from Secretary of State Arlen Erdahl illustrates the perceived needs for a publication of this type.

At the time that this publication goes to press, it is not fully certain that the 35 senate and 105 house districts created by the court order will be used for the 1972 Minnesota elections. Either a U.S. Supreme Court appeal or State Legislative action may result in a different reapportionment of legislative representation. If such a change occurs, MAPS will prepare, as quickly as possible, a new publication reflecting any changes that may be made.

Dear John:

I have been informed by my staff that there is a possibility that the University of Minnesota's MAPS operation is considering preparing a 1970 Census analysis of the newly created legislative districts.

If a firm decision has not yet been made to proceed with this analysis, may I urge you to do so. There is a real public need, I believe, to have census data by legislative district. As you can appreciate, many of these districts are composed of unfamiliar areas, at least to a great many of the residents of those districts, as well as others. Census data by legislative district could greatly aid the public in a better understanding of their new districts. Nearly every day people are in our office requesting information on the new districts.

There is also a need, I feel, to make this data available so that candidates for the legislature - and subsequently - newly-elected legislators can react to public issues with a more-informed understanding of their constituency. Perhaps the only thing that is more important than a well-informed electorate is well-informed candidates and public officials.

Sincerely,

A handwritten signature in cursive script that reads "Arlen".
